

Hydroquinone 2% + Mometasone 0.1% + Tretinoin 0.025%

Hydroquinone Tretinoin Cream is used in the treatment of melasma. It helps in quick skin renewal. It provides relief from redness, swelling, and itching.

USES OF HYDROQUINONE TRETINOIN CREAM

- Treatment of Melasma
- Hyperpigmentation

BENEFITS OF HYDROQUINONE TRETINOIN CREAM

In Treatment of Melasma

Melasma is a common skin problem that causes dark, discolored patches on your skin. It is more commonly seen in females than males. Skinshine Cream helps to lighten these dark patches of the skin usually caused by pregnancy, birth control pills, hormone medicine, or injury to the skin. It effectively blocks that process in the skin that leads to discoloration. Skinshine Cream also reduces any redness, rash, pain or itchiness that may be caused in this condition.

This improves your self-esteem and confidence as your appearance changes. You should always use it as prescribed and only apply the amount you have been told to. Keep using it for as long as it is prescribed to get the full benefits.

HOW HYDROQUINONE TRETINOIN CREAM WORKS

Hydroquinone Tretinoin Cream is a specialized formulation designed to address melasma, a condition characterized by dark spots on the skin. This cream combines three active ingredients, each contributing to its effectiveness:

Active Ingredients:

1. [Hydroquinone](#):

- Function: Skin Lightening Agent
- Mechanism: Reduces Melanin Production
- Effect: Reversible Lightening of Skin Tone

2. [Mometasone](#):

- Function: Steroid Component
- Mechanism: Blocks Prostaglandin Production
- Effect: Reduces Redness, Swelling, and Itchiness of the Skin

3. [Tretinoin](#):

- Function: Vitamin A Derivative
- Mechanism: Promotes Skin Renewal
- Effect: Accelerates Natural Skin Regeneration Process

Detailed Functions:

Hydroquinone:

- **Skin Lightening Properties:**

- Reduces the production of melanin, a pigment responsible for skin darkening.
- Leads to a reversible lightening effect on the skin.

Mometasone:

- **Anti-Inflammatory Action:**

- Blocks the production of prostaglandins, chemical messengers that contribute to skin inflammation.
- Alleviates redness, swelling, and itchiness of the skin.

Tretinoin:

- **Skin Renewal and Regeneration:**

- Derived from Vitamin A, it aids in the natural renewal process of the skin.
- Stimulates cellular turnover, leading to a more rapid regeneration of skin cells.

HOW TO USE IT AND PRECAUTIONS

Hydroquinone Tretinoin Cream is primarily recommended for individuals dealing with melasma, a condition characterized by hyperpigmented patches on the skin.

Application Guidelines:

- **Consultation with a Healthcare Provider:**
 - Prior to use, it is crucial to consult a healthcare professional for proper assessment and guidance.
- **Patch Test:**
 - Conduct a patch test on a small area of skin to check for any adverse reactions or allergies.
- **Even Application:**
 - Apply a thin layer of the cream evenly on affected areas, avoiding contact with eyes, nose, and mouth.
- **Sun Protection:**
 - Use sunscreen with a high SPF during the day to enhance the effectiveness of the treatment and protect the skin.

Precautions:

- **Avoid Prolonged Use:**
 - Prolonged or excessive use of hydroquinone may lead to undesirable skin effects. It is recommended to follow a prescribed regimen.
- **Discontinue in Case of Irritation:**
 - If skin irritation or allergic reactions occur, discontinue use and seek medical advice promptly.
